

## **Postdoctoral Position in Stem Cell and Epigenetic Regulation of Trophoblast Lineage Development and Placentation**

An NIH funded postdoctoral position is available to study molecular mechanisms and signaling events controlling trophoblast stem cell development and differentiation and organization of the hemochorial placenta (see: *Proc Natl Acad Sci USA* 112:E6175-E6184, 2015; *Mol Cell Biol* 35:3163-3177, 2015; *Proc Natl Acad Sci USA* 113:5144-5146, 2016; *Proc Natl Acad Sci USA* 113:E7212-E7221, 2016). Applicants should have a Ph.D. and/or M.D. degree and experience in molecular biology, rodent embryo handling and manipulation techniques, or human trophoblast and placentation, and a strong work ethic and commitment to become an independent scientist. Competitive salaries will be negotiable and are dependent upon experience. Application review begins immediately and will continue until the positions are filled.

Please send curriculum vitae, a letter outlining research experience and career goals, and names and addresses of three references to:
